Plan Map of 2021 Diamond Drill Holes

Cross Section Illustrating Geological Context of Two Discrete Target Areas

Example of strong silica-sericite alteration and semi-massive pyrite-pyrrhotite ± chalcopyrite ± arsenopyrite mineralization at S1 DD21GC010 – 164 to 194 m

Example of massive pyrite-pyrrhotite mineralization at S1 target. DD21GC010 – 180.5 m.

Example of strained ultramafic unit underlying swamp and adjacent to highly anomalous till samples DD21GC001 – 130 to 142 m.

Example of quartz-carbonate veining with strong ferroan-dolomite altered wallrock. Blebby to needle shaped arsenopyrite present in veins and wallrock. Basaltic unit within greater ultramafic unit. DD21GC001 – 184.0 m.
